J. 316:631-637(1996).

-!- FUNCTION: PYRUVATE CARBOXYLASE CATALYZES A 2-STEP REACTION,
INVOLVING THE ATP-DEPENDENT CARBOXYLATION OF THE COVALENTLY
ATTACHED BIOTIN IN THE FIRST STEP AND THE TRANSFER OF THE
CARBOXYL GROUP TO PYRUVATE IN THE SECOND. CATALYZES IN A TISSUE
SPECIFIC MANNER, THE INITIAL REACTIONS OF GLUCOSE (LIVER, KIDNEY)
AND LIPID (ADIPOSE TISSUE, LIVER, BRAIN) SYNTHESIS FROM PYRUVATE.
-!- CATALYTIC ACTIVITY: ATP + PYRUVATE + HCO(3)(-) = ADP + phosphate +

"Molecular characterization of pyruvate carboxylase deficiency in two
                                                                                                                                                     PEDIATE. RES. 43:579-584 (1998).

-!- FUNCTION: PYRUVATE CARBOXYLASE CATALYZES A 2-STEP REACTION,

INVOLVING THE AIP-DEPENDENT CARBOXYLATION OF THE COVALENTLY

AITACHED BIOTHIN THE FIRST STEP AND THE TRANSFER OF THE

CARBOXYL GROUP TO PYRUVATE IN THE SECOND. CATALYZES IN A TISSUE
SPECIFIC MANNER, THE INITIAL REACTIONS OF GLUCOSE (LIVER, KIDNEY)

AND LIPPLO (ADIPOSE TISSUE, LIVER, BRAIN) SYNTHESIS FROM PYRUVATE.

-!- CATALYTIC ACTIVITY: AIP + PYIUVATE + HCO(3)(-) = ADP + Phosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                  DISEASE: Defects in PC are the cause of pyruvate carboxylase deficiency (PC deficiency) [MIM:266150] leading to lactic acidosis, mental retardation and death. It occurs in three forms: mild or type A, severe neonatal or type B, and a very mild
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TIGREAMS; TIGRO1235; pyruv_carbox; 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SCIENCE 269:496-512(1995).

-I- FUNCTION: THIS PROTEIN IS A COMPONENT OF THE ACETYL COENZYME A CARBOXYLASE CAPLIZES THE CARBOXYLASE CAPLIZES THE CARBOXYLATION OF THE CARRIER PROTEIN AND THEN THE TRANSCARBOXYLASE TRANSFERS THE CARBOXYL GROUP TO FORM MALONYL-COA (BY SIMILARITY).

-I- CATALYTIC ACTIVITY: ATP + blotin-carboxyl-carrier protein + CO(2).

- ADP + phosphate + carboxybiotin-carboxyl-carrier protein.

-I- PATHWA: Long-chain fatty acid blosynthesis; first step.

-I- SUBUNIT: ACETYL-COA CARBOXYLASE IS AN HETEROHEXAMER OF BICTIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          "Whole-genome random sequencing and assembly of Haemophilus influenzae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CARBOXYL CARRIER PROTEIN, BIOTIN CARBOXYLASE AND THE TWO SUBUNITS OF CARBOXYL TRANSFERASE IN A 2:2 COMPLEX (BY SIMILARITY). SIMILARITY: TO OTHER BIOTIN-DEPENDENT ENZYMES AND CARBAMOXL-PHOSPHATE SYNTHETASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       30 KKILVANRGEIAVRAFRAALETGAATVAIYPREDRGSFHRSFASEAVRIGTEGSPVKAYL

Biol. Chem. 275:16183-16190(2000).

-!- FUNCTION: THIS PROTEIN IS A COMPONENT OF THE ACETYL COENZYME A CARBOXYLASE CAMPLEX; FIRST, BIOTIN CARBOXYLASE CATALYZES THE CARBOXYLASE CAPTILY OF THE ACREIF PROTEIN AND THEN THE TRANSCARBOXYLASE TRANSFERS THE CARBOXYL GROUP TO FORM MALONYL-COA.
-!- CAPALYTIC ACTIVITY: ATP + blotin-carboxyl-carrier protein.
-!- PATHWAY: Long-chain fatty acid blosynthesis; first step.
-!- PATHWAY: Long-chain fatty acid blosynthesis; first step.
-!- STBUNIT: ACRETYL-COA CARBOXYLASE IS AN HETEROHEXANDER OF BIOTIN CARBOXYL ACREDIA PROTEIN, BIOTIN CARBOXYLASE AND THE TWO SUBUNITS OF CARBOXYL TRANSFERASE IN A 2.2 COMPLEX.
-!- SIMILARITY: TO OTHER BIOTIN-DEPENDENT ENZYMES AND CARBAMOXL-
                                                                                                                                          properties of proteins encoded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Fatty acid biosynthesis; Ligase; Biotin; ATP-binding; 3D-structure; Complete proteome.

"Complete genome sequence of enterohemorrhagic Escherichia coli ol57:H7 and genomic comparison with a laboratory strain K-12.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CARBOXYLASE COMPLEX; FERT, BIOTIN CARBOXYLASE CATALYZES THE TRANSFERS THE CARRIER PROTEIN AND THEN THE TRANSCARBOXYLASE TRANSFERS THE CARRIER PROTEIN AND THEN THE TRANSCARBOXYLASE TRANSFERS THE CARBOXYL GROUP TO FORM MALONYL-COA.

-I-CATALYTIC ACTIVITY: ATP + biotin-carboxyl-carrier protein + CO(2)

-I-PATHMAY: Long-chain fatty acid biosynthesis; first step.

-I-PATHMAY: LONg-chain fatty acid biosynthesis; first step.

-I-SAUBUNT: ACETYL-COA CARBOXYLASE IS AN HETEROHEXAMER OF BIOTIN
CARBOXYL CARRIER PROTEIN, BIOTIN CARBOXYLASE AND THE TWO SUBUNITS
OF CARBOXYL TRANSFERASE IN A 2:2 COMPLEX (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NATURE 406.959-964(2000).

-I FUNCTION: THIS PROTEIN IS A COMPONENT OF THE ACETYL COENZYME A CARBOXYLASE COMPLEX; FIRST, BIOTIN CARBOXYLASE CATALIZES THE CARBOXYLATION OF THE CARRIER PROTEIN AND THEN THE TRANSCARBOXYLASE TRANSFERS THE CARDOXYL GROUP TO FORM MALONYL-COA.

-I CATALITIC ACTIVITY: ATP + biotin-carboxyl-carrier protein + CO(2)

-I PATHWAY: Long-chain fatty acid biosynthesis; first step.

-I DATHWAY: Long-chain fatty acid biosynthesis; first step.

-I SUBUNIT: ACETYL-COA CARBOXYLASE IS AN HETEROHEXAMER OF BIOTIN CARBOXYL CARRIER PROTEIN, BIOTIN CARBOXYLASE AND THE TWO SUBUNITS OF CARRIEX PROTEIN, BIOTIN CARBOXYLASE AND CARBOXYLASE IN A 2:2 COMPLEX.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                STRAIN=ATCC 15692 / PAO1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -i- PATHWAY: Leucine catabolism.
-i- SUBNUT: Probably a dodecamer composed of six biotin-containing alpha subunits and six beta subunits.
-i- SUBNUT: ALCATION: Mitochondrial matrix.
-i- DISEASE: Defects in MCCC1 are the cause of 3-
methylcrotonylglycinuria type I (MCGI) [MIM:210200]; also designated CGA or CG2. MCGI is a recessive disease that is characterized by muscular hypotonia and atrophy, probably of
